

About Mannatech's Uth Facial Skin Care Products

Insights from Mannatech's R&D Department

Tell Me about Mannatech's Uth Facial Products

Mannatech's facial skin care product line includes Uth™ Rejuvenation Creme, Facial Cleanser and Moisturizer. Designed to meet the skin care needs of men and women 20 years and older with all skin types, these three products are rich in cellular communication supporting glyconutrients, a nutrient category unique to Mannatech. They also contain a wide array of natural botanical ingredients that can help maintain healthy-looking skin and fight signs of aging.*

Launched in 2010, the Uth Cleanser and Moisturizer, which contain our Jeunesse 7™ proprietary blend of the mineral-rich clay montmorillonite and glyconutrient mannans, galactoarabinans and trehalose, were formulated to gently cleanse and then optimally hydrate the skin, reduce the appearance of fine lines and wrinkles and improve tone, smoothness and radiance.

Launched in 2013, Uth Rejuvenation Crème provides an advanced approach to reducing troublesome signs of skin aging by improving the extensibility, resiliency and elasticity of skin and further reducing the appearance of fine lines, wrinkles and uneven pigmentation. To support deeper penetration, we spherinized our signature glyconutrient from aloe vera gel, Manapol® powder, with other botanically derived glyconutrients that have been shown in preliminary studies to support the health of the skin matrix. Additional advanced botanical ingredients were selected because they have been shown in laboratory studies to increase the water-binding capacity of skin surface cells and subsequent circulation of water deep into the skin and to reduce the activity of a protein complex associated with enlarged pores and increased melanin production.

What Clinical Studies Have Evaluated the Effects of the Uth Facial Products?

While the FDA does not require that cosmetics be tested for safety or efficacy, Mannatech has chosen to submit all of our cosmetic products for

human testing to a company with recognized expertise in this area: Thomas J. Stephens & Associates, Carrollton, TX. Results of these studies, along with data collected from our ongoing Product Safety Monitoring Program, indicate that all of Mannatech's skin care products, including our facial products, are safe.*

Product (number of subjects evaluated)	Hypoallergenic	Does not clog pores	Safe for use around the eyes
U th Rejuvenation Crème (152)**	✓	✓	✓
U th Facial Cleanser (281)**	✓	✓	✓
U th Moisturizer (281)**	✓	✓	✓

Corneometer measurements indicate that use of Uth Moisturizer or Rejuvenation Crème hydrated the skin for a full eight hours after just one application. Cutometer measurements indicate that Uth Rejuvenation Crème significantly improved skin resiliency, elasticity and firmness. Study participants were very positive about the Uth product line, reporting that their skin felt healthy, clean, firm, radiant and had an even texture and tone, and a reduced appearance of fine lines and wrinkles.*

What Can I Expect to Experience From the Uth Facial Products?

The skin, our body's first line of defense, can be easily damaged by external factors (e.g., sunlight, air pollution) and internal factors (e.g., cigarette smoking, poor diets). These factors can accelerate skin aging and contribute to dullness, dryness and the appearance of fine lines and wrinkles. To protect skin, it's important to stay away from these free-radical producers, keep the skin hydrated, use sun protection and eat a healthy diet rich in fresh fruits and vegetables. Mannatech's Uth facial products have been validated by human clinical studies to be safe and may minimize many of the most troubling signs of aging. When used together, they can be very beneficial to the overall health and appearance of the skin.*

* Based on 8- and 12-week clinical studies conducted by Stephens & Associates. Individual results may vary.
